

FOR THE PRINCIPAL — PLAIN-LANGUAGE SUMMARY

What is your school becoming *known for*?

Every one of the six areas we track, compared January to March — plus the three claims most worth telling parents, prospective families, or the board, and an article ready to publish.

Every one of the six areas we track **grew between January and March** — a gain of **20 points on average**. **Judgment & Reasoning** grew the most, up 30 points, and even your steadiest area, **Core Knowledge**, still added **13 points** — all while remaining your strongest area outright. The three stories below are the ones most worth sharing outside the school.

Reputation Report — March 2026

Where your school grew, area by area

January versus March, for each of the six areas we track. The gold bar shows where your school stands now; the grey mark shows where it stood in January.

Three stories worth telling

The three data points above that are most worth repeating outside the school — to parents, prospective families, or the board.

CURRENT STRENGTH

★ Core Knowledge

Your highest score of all six areas

Students are consistently strongest on foundational recall and understanding — the base the other five areas build on.

FASTEST GROWING

↑ Judgment & Reasoning

The biggest jump of any area since January

The single largest improvement since January — students are visibly getting better at weighing evidence and making calls, not just recalling facts.

BECOMING DISTINCTIVE

◆ Creativity & Innovation

The second-biggest jump, on something few schools even measure

Rare for a school to see this much movement here — worth owning this story before another school claims it with less evidence.

Reputation Report — March 2026

A ready-to-share article

Built from the three stories above — ready to use as-is for the school blog, a newsletter, or LinkedIn.

"Three Things We Learned About Our Students This Term"

This term's data told us three stories worth sharing: our students' foundational knowledge remains the strongest skill we measure, their judgment and reasoning grew faster than anything else we track, and creativity is quietly becoming one of the things this school is known for.

We're not claiming credit for all of it — some of this is simply students growing up. But the pattern across all three areas points to something intentional: less rote recall, more open-ended thinking, and more room for judgment calls in daily lessons. We'll be watching to see if this holds through the next assessment cycle, and we'll share what we find either way.

This report was built from the same data shown on the dashboard — the chart, the three cards, and the draft above all trace back to the same January-to-March scores.
